- Getting Started
- Checklist Items
  - List checklist items
  - Show a checklist item
  - Create a checklist item
  - Update a checklist item
  - Destroy a checklist item
- Clients
  - List clients
  - Show a client
  - Create a client
  - Update a client
  - List all budgets
  - when a budget not exists, creates a new budget
- Comments
  - List comments on a task
  - Show a specific comment
  - Create a new comment
  - Create a new comment
  - Create a new project comment
  - Update a comment
  - Destroy a comment
  - Reaction to a comment
- Demanders
  - List all demanders of user
  - Adds a demander to a user
  - Replace a user partners list
  - Destroy a demander of a user
- Descendants
  - List all task descendants from a task
  - Add a descendant task to a task
  - Remove a descendant task from a task
- Description
  - Query Multiple Descriptions
  - Query Single Project Description
  - Query Single Task Template Description
  - Update Project Description
  - Update Task Template Description
- Documents
  - List all documents uploaded to a task
  - Show a document
  - Download a document
  - Download a document thumbnail
  - Download a document preview
  - Create a document
  - Update the transfered status of a document
  - Destroy a document
  - Download multiple documents as zip
- EventNotification
  - List all user's event notifications
  - Assign readed_in on event_notification
  - Assigns all user's event notifications
  - Delete a event_notification
  - Delete all event_notifications
- Filters
  - List all projects filters
  - Show a project filter
  - Destroy a project filter
  - List all tasks filters
  - Show a task filter
  - Destroy a task filter
- Manual Work Periods
  - List all manual work periods
  - Show a Manual Work Period
  - Create a Manual Work Period
  - Update a Manual Work Period
  - Destroy a Manual Work Period
- OffDays
  - List all off days
  - Show an off day
  - Create an off day
  - Update an off day
  - Destroy an off day
- Partners
  - List all partners of user

    - Adds a partner to a user
    - Replace a user partners list
    - Destroy a partner of a user
- Prerequisites
    - List all task prerequisites from a task
    - Add a task prerequisite to a task
    - Remove a task prerequisite from a task
    - List all task template prerequisites from a task template
    - Add a task template prerequisite to a task template
    - Remove a task template prerequisite from a task template
- Project Description
    - Update the project description
- Project Sub Groups
    - List all Project Sub Groups using Project Group id
    - List all Project Sub Groups using Client id
    - Show a Project Sub Group
    - Create a Project Sub Group
    - Update a Project Sub Group
    - Destroy a Project Sub Group
    - Move project sub group to another project group
- Project Templates
    - List all Project Templates
    - Show a Project Template

    - Create a workflow element
    - Reorder a workflow element
    - Destroy a workflow element
- Workflows
    - Show a task workflow
    - Create a task workflow
    - Destroy task workflow
    - Show a task_template workflow
    - Create a task_template workflow
    - Destroy task_template workflow

Runrun.it API Documentation

How to authenticate to use the API

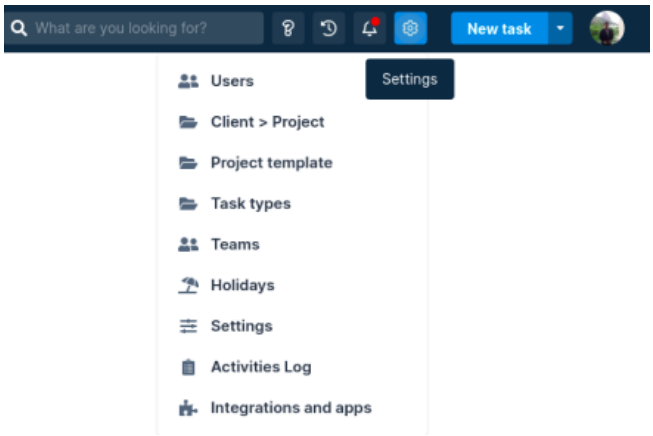
Every request to the API should be sent with the correct authentication headers, `app_key` and `user_token`:

```
curl "https://runrun.it/api/v1.0/users" -X GET \
  -H "App-Key: f9c650c98eeb28e345e0a38a184d20cb" \
  -H "User-Token: roBknmkPI0ALmwkRuC1q"
```

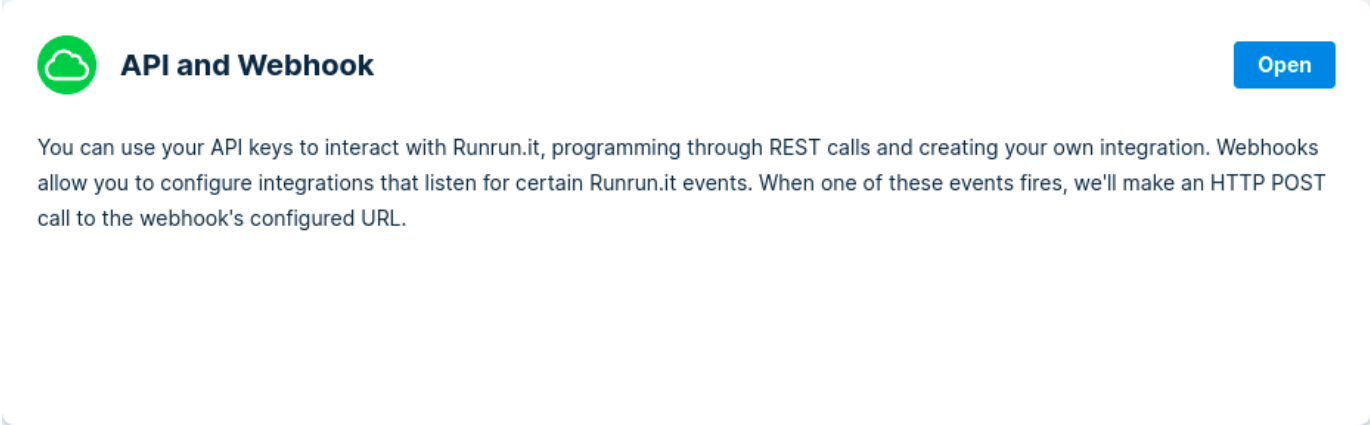
Whenever you send the incorrect information on `app_key` or `user_token`, the response will be `401 Unauthorized`. The `user_token` is unique to each user and allows an agent to act on behalf of that user on Runrun.it. The `app_key` identifies a whole account, and **cannot be changed through the GUI**.

How to access your API authentication keys

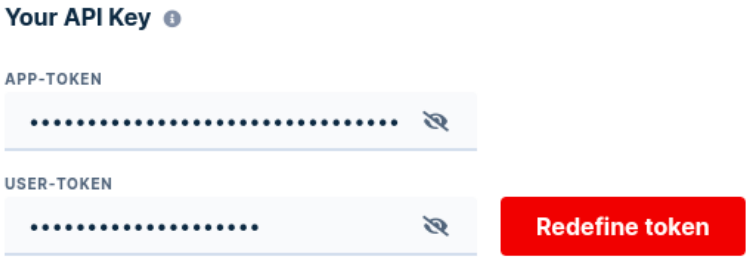
API access is a premium feature only available to customers of certain paid accounts. To see which plans include API access check here. However developers with ideas for apps taking advantage of Runrun.it are always welcome to contact help@runrun.it about setting up a test account with API access.



1. Go to Integration and Apps on Runrun.it
2. Then look for "API and Webhooks" and click `Open`



3. Your `app_key` will be displayed next to the `user_token`



Data format

All responses will be valid JSON. Requests should be in JSON as well (although for most actions form-encoded data is accepted as well).

All dates will be in ISO 8601 format. The time zones, if specified, will take into account when doing date operations. Another thing to be mentioned is that you need to `urlencode` your dates if it does contain special characters like + to specify time zones.

Request limit

There is a maximum limit of 100 requests per minute. If this limit is reached, it will be necessary to wait 1 minute to make new requests. In this case, the response will return the HTTP status code 429 with the following headers:

- "RateLimit-Limit" → request limit
- "RateLimit-Remaining" → remaining requests to reach the limit
- "RateLimit-Reset" → date when the limit will be restored

Excessive use of the API will result in the offending `app_key` being revoked to ensure the quality of service for other users.

Pagination

Overview

Runrun.it API uses pagination to manage large sets of data efficiently. This section explains the use of headers and query parameters for pagination, along with a practical guide for implementation.

Headers

- **X-Item-Range**: Indicates the range of items in the current response. The format is `items {first_position}-{last_position}/{total}`.
- **Link**: Provides hypermedia links for navigation:
  - `rel="self"`: The current page.
  - `rel="prev"`: The previous page (if applicable).
  - `rel="next"`: The next page (if available).
  - `rel="last"`: The last page in the dataset.
- **X-Item-Without-View-Permission** (optional): Shows the count of items not viewable due to permissions.

Query Parameters

- **page**: Specifies the page number (starts from 1). If out of range, defaults to 1.
- **limit**: Limits the number of items per page. The default and maximum limit is 100.
- **offset**: Determines the starting point for data retrieval.

Practical Usage

1. **Initial Request**: Start with your API call without specific `page`, `limit`, or `offset`.
2. **Analyzing the Response**: Check the `X-Item-Range` and `Link` headers. The `Link` header includes navigation links such as `self`, `prev`, `next`, and `last`.
3. **Navigating Through Pages**: Use the URL in the `rel="next"` link from the `Link` header for subsequent requests. Continue until this link is absent, indicating the last page.
4. **Optional Parameters**: Customize the `limit` to change the number of items per page and use `offset` to start from a specific point in the dataset.

Notes

- Pagination is based on RFC 7233 and RFC 5988.
- The API ensures efficient data retrieval and navigation through dynamic parameter validation and calculation.
- Be mindful of rate limits and data usage when making successive API calls.

Examples

First Request

```
curl "https://runrun.it/api/v1.0/clients" -X GET \
  -H "App-Key: f9c650c98eeb28e345e0a38a184d20cb" \
  -H "User-Token: roBknmkPI0ALmwkRuC1q" \
  -H "Content-Type: application/json"
```

Response Headers

```
Link: </api/clients>; rel="self", </api/clients?page=2>; rel="next", </api/clients?page=2>; rel="last"
X-Item-Range: items 1-100/155
```

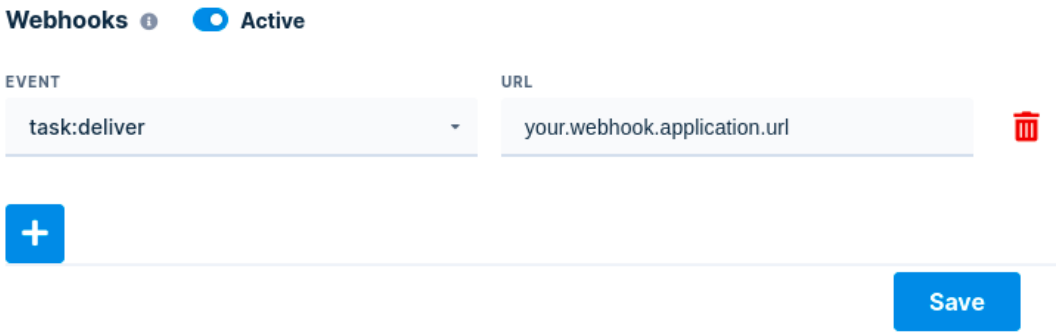
Requesting the next page

```
curl "https://runrun.it/api/v1.0/clients?page=2" -X GET \
  -H "App-Key: f9c650c98eeb28e345e0a38a184d20cb" \
  -H "User-Token: roBknmkPI0ALmwkRuC1q" \
  -H "Content-Type: application/json"
```

Webhooks

Manage Webhooks

On the `API and Webhooks` page, you can manage all webhooks on your account. To **create** or **update** a webhook, click on the + button, then select the event you want to listen to and enter the URL that will receive the HTTP POST payload. After creating a webhook, click `Save` to persist your changes.



To **delete** a webhook, click on the trash icon button and then "Delete".

Supported events

- `task:create` → Triggered when a task is created.
- `task:update` → Triggered when the following task attributes are updated: title, tags, desired delivery date, desired start date, points, custom fields.
- `task:destroy` → Triggered when a task is deleted.
- `task:deliver` → Triggered when a task is delivered, that is, moved from an open stage to a closed stage.
- `task:reopen` → Triggered when a task is reopened, that is, when it is moved from a closed step to an open step.
- `task:move` → Triggered when a task is moved between stages without changing its state (open/closed).
- `task:add_manual_work_period` → Triggered when a user adds hours manually to a task.
- `task:remove_manual_work_period` → Triggered when a user removes hours manually to a task.
- `task:change_time_worked` → Triggered when the total time worked on a task changes.
- `task:mark_as_urgent` → Triggered when a task is marked as urgent.
- `task:unmark_as_urgent` → Triggered when a task is unmarked as urgent.
- `task:desired_start_date_upcoming` → Triggered when task desired start date is upcoming.
- `task_assignment:play` → Triggered when an assignee clicks on the play button.
- `task_assignment:pause` → Triggered when an assignee clicks on the pause button.
- `task:change_evaluation_status` → Triggered when the task evaluation status changes.
- `task:evaluations:create` → Triggered when new evaluation requests are created.
- `task:evaluations:reset` → Triggered when existing evaluation requests are requested again.
- `task:evaluations:destroy` → Triggered when existing evaluation requests are deleted.
- `task:evaluation:approve` → Triggered when an evaluation request is approved.
- `task:evaluation:reject` → Triggered when an evaluation request is rejected.
- `task:evaluation:reset` → Triggered when an evaluation request is reseted.
- `task:assignments:create` → Triggered when new assignees are added to a task.
- `task:description:update` → Triggered when task description is updated.
- `task:comment:create` → Triggered when a comment on a task is created by a user.
- `task:comment:update` → Triggered when a comment on a task is edited by a user.
- `project:create` → Triggered when a project is created.
- `project:change_time_worked` → Triggered when the total time worked on a project changes.
- `project:comment:create` → Triggered when a comment on a project is created by a user.
- `project:comment:update` → Triggered when a comment on a project is edited by a user.
- `client:create` → Triggered when a client is created.
- `team:comment:create` → Triggered when a comment on a team bulletin is created by a user.
- `team:comment:update` → Triggered when a comment on a team bulletin is edited by a user.
- `enterprise:comment:create` → Triggered when a comment on the enterprise bulletin is created by a user.
- `enterprise:comment:update` → Triggered when a comment on the enterprise bulletin is edited by a user.
- `document:comment:create` → Triggered when a comment on an attachment is created by a user.
- `document:comment:update` → Triggered when a comment on an attachment is edited by a user.

Response

Here are some examples of the HTTP POST payload:

- `task:create`

Contacting API Support

If you have any trouble using the API, you can email us at help@runrun.it.

Checklist Items

» GET **/api/v1.0/checklists/:checklist_id/items** List checklist items

» GET **/api/v1.0/checklists/:checklist_id/items/:id** Show a checklist item

» POST **/api/v1.0/checklists/:checklist_id/items** Create a checklist item

» PUT **/api/v1.0/checklists/:checklist_id/items/:id** Update a checklist item

» DELETE **/api/v1.0/checklists/:checklist_id/items/:id** Destroy a checklist item

Clients

» GET **/api/v1.0/clients** List clients

» GET **/api/v1.0/clients/:id** Show a client

» POST **/api/v1.0/clients** Create a client

» PUT **/api/v1.0/clients/:id** Update a client

» GET **/api/v1.0/clients/:client_id/monthly_budgets** List all budgets

» POST **/api/v1.0/clients/:client_id/update_monthly_budget** when a budget not exists, creates a new budget

Comments

» GET **/api/v1.0/tasks/:task_id/comments**

Demanders

» GET /api/v1.0/comments/:id Show a specific comment
» POST /api/v1.0/comments Create a new comment
» POST /api/v1.0/comments List comments on a task
» POST /api/v1.0/comments Create a new project comment
» PUT /api/v1.0/comments/:id Create a new comment
» DELETE /api/v1.0/comments/:id Destroy a comment
» POST /api/v1.0/comments/:id/reaction Reaction to a comment
» GET /api/v1.0/comments/:id Update a comment
» POST /api/v1.0/users/:user_id/demanders Adds a demander to a user
» POST /api/v1.0/users/:user_id/demanders List all demanders of user
» DELETE /api/v1.0/users/:user_id/demanders/replace Replace a user partners list
» DELETE /api/v1.0/users/:user_id/demanders/:id Destroy a demander of a user
» GET /api/v1.0/tasks/:task_id/descendants List all task descendants from a task
» POST /api/v1.0/tasks/:task_id/descendants Add a descendant task to a task
» DELETE /api/v1.0/tasks/:task_id/descendants/:id Remove a descendant task from a task
